## ELISA PRODUCT INFORMATION & MANUAL

### ALKBH3 NBP2-60535

Enzyme-linked Immunosorbent Assay for quantitative detection of Human ALKBH3 ELISA Kit. For research use only. Not for diagnostic or therapeutic procedures.

www.novusbio.com - P: 303.730.1950 - P: 888.506.6887 - F: 303.730.1966 - technical@novusbio.com

Novus kits are guaranteed for 6 months from date of receipt

#### **Assay Summary**

Step 1. Add 50  $\mu$ l of Standard or Sample per well. Incubate 2 hours.

Step 2. Wash, then add 50  $\mu l$  of Biotinylated Antibody per well. Incubate 2 hours.

Step 3. Wash, then add 50  $\mu l$  of SP Conjugate per well. Incubate 30 minutes.

Step 4. Wash, then add 50  $\mu l$  of Chromogen Substrate per well. Incubate 15 minutes.

**Step 5.** Add 50  $\mu$ l of Stop Solution per well. Read at 450 nm immediately.

#### Symbol Key

Consult instructions for use.

#### Human ALKBH3 ELISA Kit

Catalog No. NBP2-60535 Sample insert for reference use only

#### Introduction

Alpha-ketoglutarate-dependent dioxygenase alkB homolog 3 (ALKBH3), also known as prostate cancer antigen-1 (PCA-1), belongs to the alkB family. ALKBH3 contains 286 amino acids with a molecular mass of about 40 kDa (1). ALKBH3 is present at relatively high levels in spleen, prostate, bladder, and colon tissues. It catalyzes the removal of both 1-methyladenine and 3-methylcytosine from methylated polynucleotides and protects against the cytotoxicity of methylating agents (2). It repairs alkylation damage in both DNA and RNA and plays important defense roles for maintaining genome integrity (3). ALKBH3 is critically involved in survival and invasion in certain malignancies.

#### Principle of the Assay

The Human **ALKBH3** ELISA (Enzyme-Linked Immunosorbent Assay) Kit is designed for detection of ALKBH3 in human **cell culture samples**. This assay employs a quantitative **sandwich enzyme immunoassay** technique that measures human ALKBH3 in approximately 5 hours. A polyclonal antibody specific for human ALKBH3 has been pre-coated onto a 96-well microplate with removable strips. ALKBH3 in standards and samples is sandwiched by the immobilized antibody and a biotinylated polyclonal antibody specific for human ALKBH3, which is recognized by a streptavidin-peroxidase (SP) conjugate. All unbound material is washed away and a peroxidase enzyme substrate is added. The color development is stopped and the intensity of the color is measured.

#### **Caution and Warning**

- This product is for **Research Use Only** and is not intended for use in diagnostic procedures.
- Prepare all reagents (diluent buffer, wash buffer, standard, biotinylated antibody, and SP conjugate) as instructed, prior to running the assay.
- Prepare all samples prior to running the assay. The dilution factors for the samples are suggested in this insert. However, the user should determine the optimal dilution factor.

- Spin down the SP conjugate vial, the biotinylated antibody vial, and the standard diluent vial before opening and using contents.
- The Stop Solution is an acidic solution.
- The kit should not be used beyond the expiration date.

#### Reagents

- Human ALKBH3 Microplate: A 96-well polystyrene microplate (12 strips of 8 wells) coated with a polyclonal antibody against human ALKBH3.
- **Sealing Tapes:** Each kit contains 3 precut, pressure sensitive sealing tapes that can be cut to fit the format of the individual assay.
- Human ALKBH3 Standard: Human ALKBH3 in a buffered protein base (50 ng, lyophilized).
- **Biotinylated Human ALKBH3 Antibody (50x):** A 50-fold concentrated biotinylated polyclonal antibody against human ALKBH3 (120 μl).
- **EIA Diluent Concentrate (10x):** A 10-fold concentrated buffered protein base (20 ml).
- Standard Diluent (1x): A buffered protein base with stabilizer (2 ml).
- Wash Buffer Concentrate (20x): A 20-fold concentrated buffered surfactant (30 ml, 2 bottles).
- SP Conjugate (100x): A 100-fold concentrate (80 µl).
- **Chromogen Substrate (1x):** A stabilized peroxidase chromogen substrate tetramethylbenzidine (8 ml).
- Stop Solution (1x): A 0.5 N hydrochloric acid solution to stop the chromogen substrate reaction (12 ml).

#### **Storage Condition**

- Upon arrival, immediately store components of the kit at recommended temperatures up to the expiration date.
- Store Standard, SP Conjugate, and Biotinylated Antibody at -20°C.
- Store Microplate, Diluent Concentrate (10x), Standard Diluent (1x), Wash Buffer, Stop Solution, and Chromogen Substrate at 2-8°C.
- Unused microplate wells may be returned to the foil pouch with the desiccant packs and resealed. May be stored for up to 30 days in a vacuum desiccator.

#### **Other Supplies Required**

- Microplate reader capable of measuring absorbance at 450 nm
- Pipettes (1-20 μl, 20-200 μl, 200-1000 μl, and multiple channel)
- Deionized or distilled reagent grade water

#### Sample Collection, Preparation, and Storage

- Cell Culture Supernatants: Centrifuge cell culture media at 1500 rpm for 10 minutes at 4°C to remove debris and collect supernatants. Samples can be stored at -80°C. Avoid repeated freeze-thaw cycles.
- **Cell Lysate:** Rinse cell with cold PBS and then scrape the cell into a tube with 5 ml of cold PBS and 0.5 M EDTA. Centrifuge suspension at 1500 rpm for 10 minutes at 4°C and aspirate supernatant. Re-suspend pellet in ice-cold Lysis Buffer (10 mM Tris, pH8.0, 130 mM NaCl, 1% Triton X-100, protease inhibitor cocktail). For every 1 x  $10^6$  cells, add approximately 100 µL of ice-cold Lysis Buffer. Incubate on ice for 60 minutes. Centrifuge at 13000 rpm for 30 minutes at 4°C and collect supernatant.

Applicable samples may also include biofluids, cell culture, and tissue homogenates. If necessary, user should determine optimal dilution factor depending on application needs.

|          | <b>Guidelines for Dilutions of 100-fold or Greater</b><br>(for reference only; please follow the insert for specific dilution suggested)                         |                |                                                                                                                                                                                                        |  |  |  |

#### Refer to Dilution Guidelines for further instruction.

#### **Reagent Preparation**

- Freshly dilute all reagents and bring all reagents to room temperature before use.
- EIA Diluent Concentrate (10x): If crystals have formed in the concentrate, mix gently until the crystals have completely dissolved. Dilute the EIA Diluent Concentrate 10-fold with reagent grade water to produce a 1x solution. Store for up to 30 days at 2-8°C.
- Human ALKBH3 Standard: Reconstitute the Human ALKBH3 Standard (50 ng) with 1.0 ml of Standard Diluent to generate a 50 ng/ml standard

stock solution. Allow the vial to sit for 10 minutes with gentle agitation prior to making dilutions. Prepare duplicate or triplicate standard points by serially diluting from the standard stock solution (50 ng/ml) 2-fold with **EIA Diluent** to produce 25, 12.5, 6.25, 3.125, 1.563, 0.781, and 0.391 ng/ml solutions. EIA Diluent serves as the zero standard (0 ng/ml). Aliquot remaining stock solution to limit repeated freeze-thaw cycles. This solution should be stored at -20°C and **used within 48 hours**.

| Standard<br>Point | Dilution                                        | [ALKBH3]<br>(ng/ml) |
|-------------------|-------------------------------------------------|---------------------|
| P1                | 1 part Standard (50 ng/ml) + 1 part EIA Diluent | 25.00               |
| P2                | 1 part P1 + 1 part EIA Diluent                  | 12.50               |
| Р3                | 1 part P2 + 1 part EIA Diluent                  | 6.250               |
| P4                | 1 part P3 + 1 part EIA Diluent                  | 3.125               |

| P6                | 1 part P5 + 1 part EIA Diluent                  | 0.781               |
| P7                | 1 part P6 + 1 part EIA Diluent                  | 0.391               |
| P8                | EIA Diluent                                     | 0.0                 |

- Biotinylated Human ALKBH3 Antibody (50x): Spin down the antibody briefly and dilute the desired amount of the antibody 50-fold with EIA Diluent to produce a 1x solution. The undiluted antibody should be stored at -20°C.
- Wash Buffer Concentrate (20x): If crystals have formed in the concentrate, mix gently until the crystals have completely dissolved. Dilute the Wash Buffer Concentrate 20-fold with reagent grade water to produce a 1x solution.
- SP Conjugate (100x): Spin down the SP Conjugate briefly and dilute the desired amount of the conjugate 100-fold with EIA Diluent to produce a 1x solution. The undiluted conjugate should be stored at -20°C.

#### **Assay Procedure**

- Prepare all reagents, standard solutions, and samples as instructed. Bring all reagents to room temperature before use. The assay is performed at room temperature (20-25°C).
- Remove excess microplate strips from the plate frame and return them immediately to the foil pouch with desiccants inside. Reseal the pouch securely to minimize exposure to water vapor and store in a vacuum desiccator.
- Add 50  $\mu$ I of Human ALKBH3 Standard or sample to each well. Gently tap plate to thoroughly coat the wells. Break any bubbles that may have formed. Cover wells with a sealing tape and incubate for 2 hours. Start the timer after the last addition.

- Wash five times with 200 µl of Wash Buffer manually. Invert the plate each time and decant the contents; hit 4-5 times on absorbent material to completely remove the liquid. If using a machine, wash six times with 300 µl of Wash Buffer and then invert the plate, decanting the contents; hit 4-5 times on absorbent material to completely remove the liquid.
- Add 50 µl of Biotinylated Human ALKBH3 Antibody to each well. Gently tap plate to thoroughly coat the wells. Break any bubbles that may have formed. Cover wells with a sealing tape and incubate for 2 hours.
- Wash the microplate as described above.
- Add 50 µl of SP Conjugate to each well. Gently tap plate to thoroughly coat the wells. Break any bubbles that may have formed. Cover wells with a sealing tape and incubate for 30 minutes. Turn on the microplate reader and set up the program in advance.
- Wash the microplate as described above.
- Add 50 µl of Chromogen Substrate to each well. Gently tap plate to thoroughly coat the wells. Break any bubbles that may have formed. Incubate for 15 minutes or until the optimal blue color density develops.
- Add 50 µl of Stop Solution to each well. The color will change from blue to yellow. Gently tap plate to ensure thorough mixing. Break any bubbles that may have formed.
- Read the absorbance on a microplate reader at a wavelength of 450 nm **immediately**. If wavelength correction is available, subtract readings at 570 nm from those at 450 nm to correct optical imperfections. Otherwise, read the plate at 450 nm only. Please note that some unstable black particles may be generated at high concentration points after stopping the reaction for about 10 minutes, which will reduce the readings.

#### Data Analysis

- Calculate the mean value of the duplicate or triplicate readings for each standard and sample.
- To generate a standard curve, plot the graph using the standard concentrations on the x-axis and the corresponding mean 450 nm absorbance (OD) on the y-axis. The best fit line can be determined by regression analysis using log-log or four-parameter logistic curve fit.
- Determine the unknown sample concentration from the Standard Curve and multiply the value by the dilution factor.

#### **Typical Data**

• The typical data is provided for reference only. Individual laboratory means may vary from the values listed. Variations between laboratories may be caused by technique differences.

| Standard Point | ng/ml | OD    | Average OD |
|----------------|-------|-------|------------|
| P1             | 25.00 | 2.508 | 2.503      |
|                |       | 2.497 |            |

| F7             | 0.391 | 0.167 | 0.102      |
| P8             | 0.0   | 0.143 | 0.141      |
| ٢ð             | 0.0   | 0.139 | 0.141      |

#### Standard Curve

• The curve is provided for illustration only. A standard curve should be generated each time the assay is performed.

#### **Performance Characteristics**

- The minimum detectable dose of human ALKBH3 as calculated by 2SD from the mean of a zero standard was established to be 0.3 ng/ml.
- Intra-assay precision was determined by testing three samples twenty times in one assay.
- Inter-assay precision was determined by testing three samples in twenty assays.

|                   | Intra-Assay Precision |      |      | Inter-Assay Precision |      |      |
|-------------------|-----------------------|------|------|-----------------------|------|------|
| Sample            | 1                     | 2    | 3    | 1                     | 2    | 3    |
| n                 | 20                    | 20   | 20   | 20                    | 20   | 20   |
| CV (%)            | 2.9%                  | 4.1% | 3.8% | 8.2%                  | 8.4% | 9.2% |
| Average<br>CV (%) | 3.6%                  |      |      | 8.6%                  |      |      |

#### Recovery

| Standard Added Value | 0.8 – 12.5 ng/ml |  |
|----------------------|------------------|--|
| Recovery %           | 87 – 112%        |  |
| Average Recovery %   | 99.5%            |  |

#### **Cross-Reactivity**

• Expected Species Cross-Reactivity estimated based upon sequence homology.

| Species | Cross-Reactivity (%) |
|---------|----------------------|
| Canine  | 88%                  |
| Bovine  | 87%                  |
